Place

Place consists of multiple dimensions
... only one of which is geographic **space**

```
WHERE population_density < 100  
  
AND household_income > 50,000  
  
AND ...
```

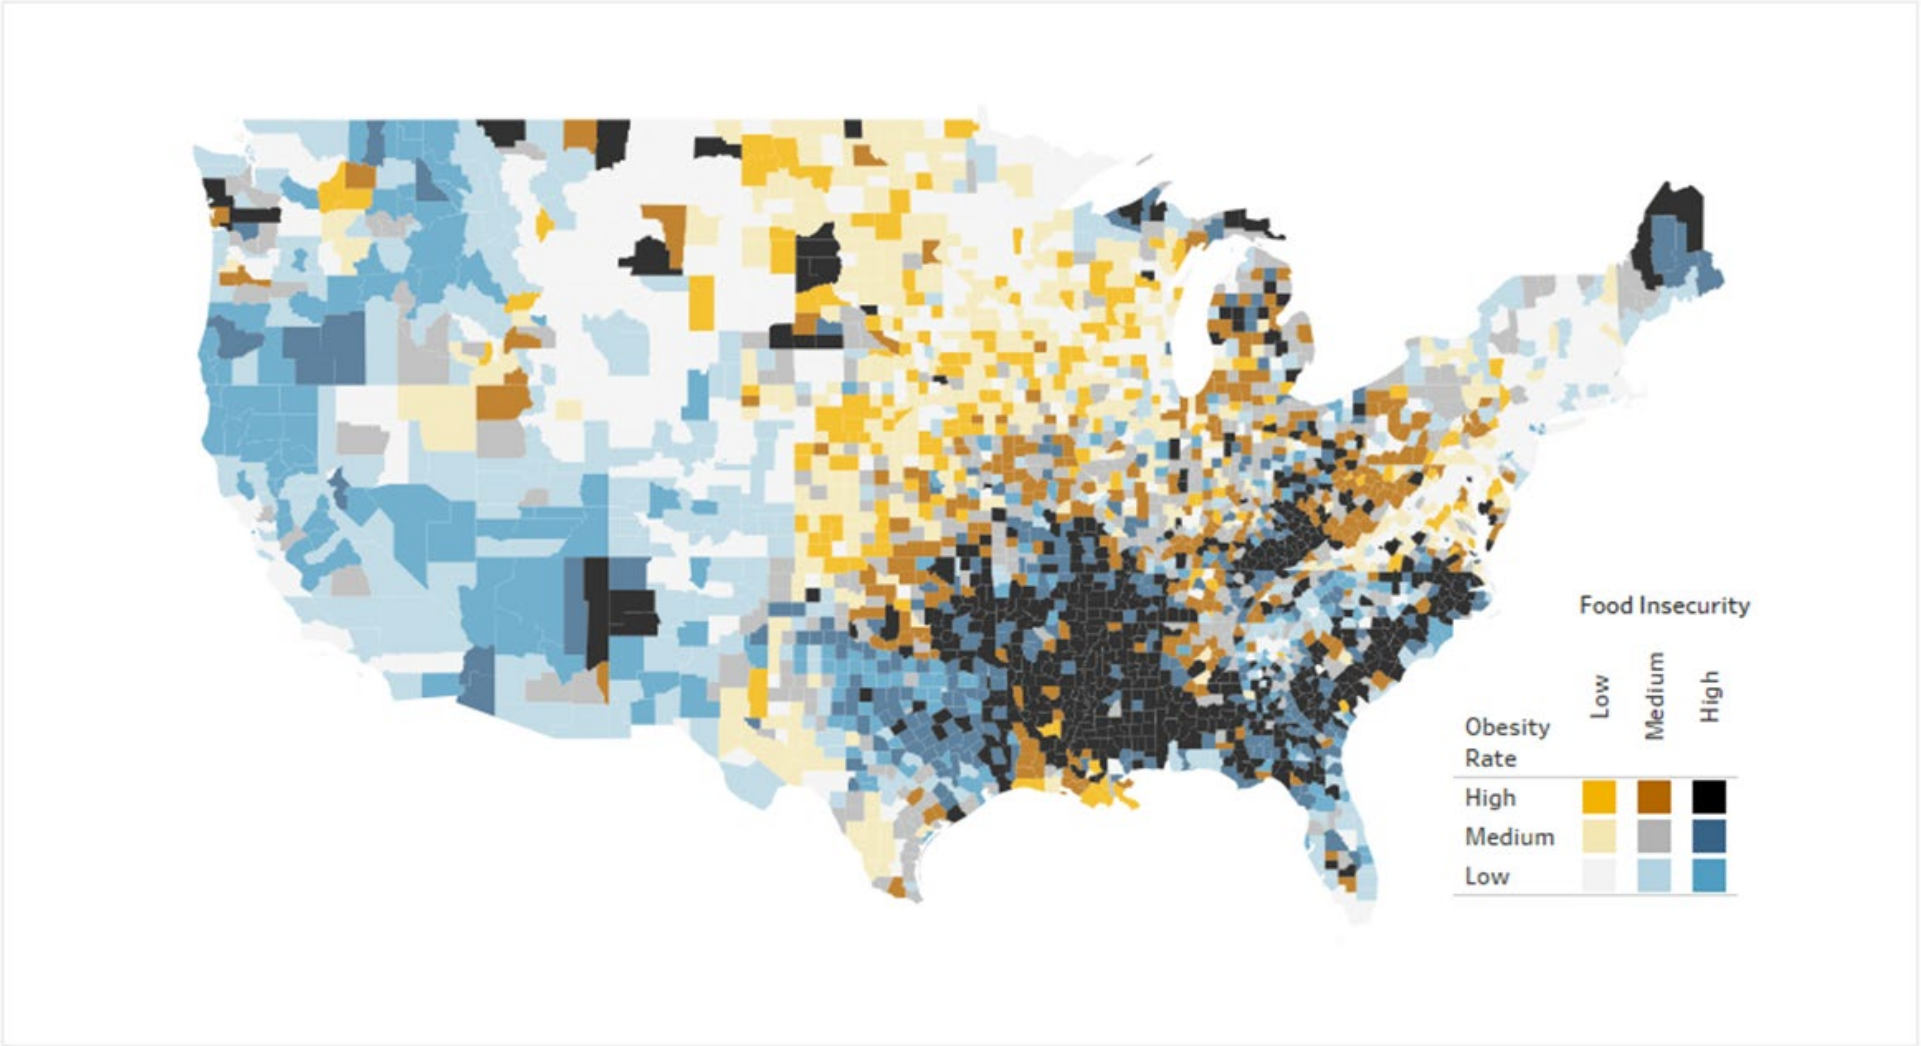

Similarity is intuitive but can be **complex**

Food insecurity vs. Obesity

Participant Study & Feedback

- 18 participants (9 female)
 - Various backgrounds
 - Some technical / some non-technical
 - Fluent in English
 - At least basic experience with web mapping
-
- Open exploration & series of directed tasks
 - Video recording and encouraged to “think out loud”
 - Mixed Methods: Qualitative and quantitative assessment

Participant Study & Feedback

“

This is more informative than a static demographic plot and I learned about the census data more deeply. I can see being helpful for making policy decisions

“

It was really easy to get an immediate view of the most similar and likely similar areas, even when I was just exploring the data.

“

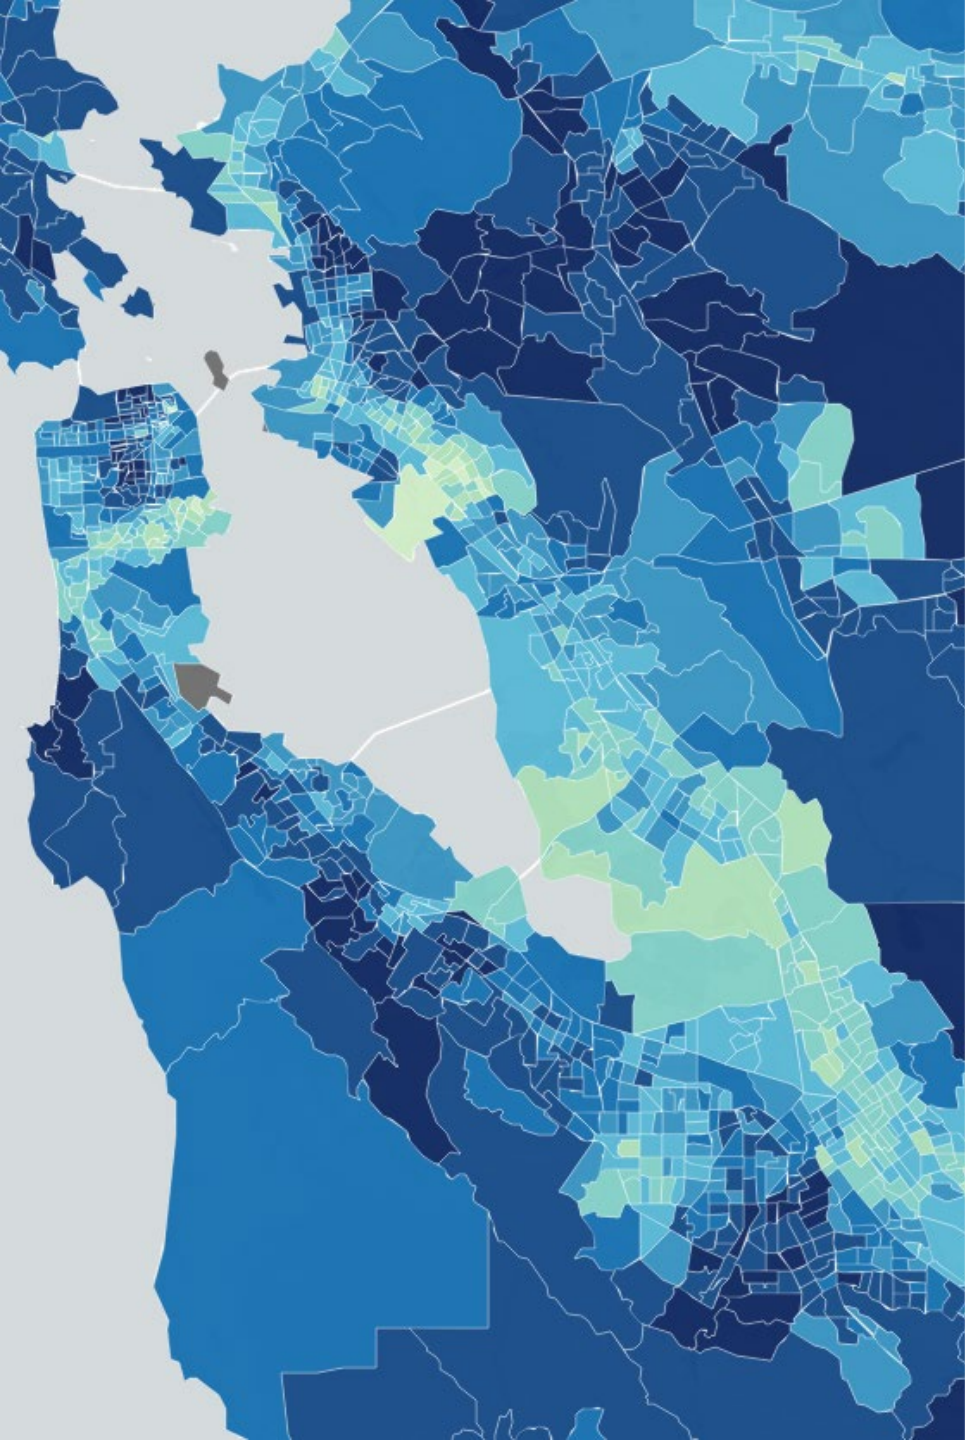

It's nice to see options like age, race as they help me navigate the data with a small set of options as opposed to showing 100 different things in the data. I can get some preliminary conclusions very quickly.
