

TABLE OF CONTENTS

Basic requirements of digital systems

Multi-purpose land information systems: technical, economic and institutional issues	1 ✓
Kenneth Dueker	
The user profile for digital cartographic data	12
Ray Boyle	
Overlay processing in spatial information systems	16
Andrew Frank	
Fundamental principles of geographic information systems	32 ✓
Nicholas Chrisman	

Models of terrain

An adaptive methodology for automated relief generalization	42
Robert Weibel	
Systematic selection of very important points (VIP) from digital terrain models for constructing triangular irregular networks	50
Zi-Tan Chen and J. Armando Guevara	
Fitting a triangulation to contour lines	57
Albert Christensen	
Measuring the dimension of surfaces: a review and appraisal of different methods	68
André Roy, Ginette Gravel and Céline Gauthier	

Numerical representation for coordinate data

Stability of map topology and robustness of map geometry	78
Alan Saalfeld	
HIPPARCHUS geopositioning model: an overview	87
Hrvoje Lukatela	
A polygon overlay system in Prolog	97
W. Randolph Franklin and Peter Wu	
Coordinate transformations in map digitizing	107
Wolfgang Kainz	

Analytical modelling applications

A spatial decision support system for locational planning: design, implementation and operation	112
Paul Densham and Marc Armstrong	
Realistic flow analysis using a simple network model	122
William Moreland and Anthony Lupien	
A geographic information system utilizing the triangulated irregular network as a basis for hydrologic modeling	129
Andrew Silfer, Gerald Kinn and James Hassett	
Methods and applications in surface depression analysis	137
Susan Jensen and Charles Trautwein	

Models of spatial error

Multiple sources of spatial variation and how to deal with them	145
Peter Burrough	
Mapping the spatial variability of soils: a cartographer's approach	155
Ferenc Csillag	
A model of error for choropleth maps, with applications to geographic information systems	165
Michael Goodchild and Odette Dubuc	
Uncertainties in land information systems databases	175
Yvan Bédard	

Algorithms for spatial search or query

Spatial ordering of Voronoi networks and their uses in terrain database management	185
Christopher Gold	
The use of range-tree spatial indexing to speed GIS data retrieval	195
Bruce Blackwell	
Formatting geographic data to enhance manipulability	201
Gail Langran and Barbara Buttenfield	

Generalization and scale changing

How to survive on a single detailed database	211
Kate Beard	
Optimum point density and compaction rates for the representation of geographic lines	221
Jean-Claude Muller	
The psi-s plot: a useful representation for digital cartographic lines	231
Michael O'Neill, and David Mark	
Perfecting automatic line drawing	241
Kurt Kubik and Joseph Loon	

TIGER developments

The TIGER structure	249
Christine Kinnear	
Topology in the TIGER file	258
Gerard Boudriault	
Maintenance of geographic structure files at the Bureau of the Census	264
Terence McDowell, David Meixler, P. Rosenson, and Beverly Davis	
Estimating production parameters for large volume automated mapping on a raster plotter	270
Thomas Wanie	

Database architecture

Desirable characteristics of a spatial database management system	278 ✓
Stephen Guptaill	
TIGRIS: topologically integrated geographic information system	282
John Herring	
An integrated DBMS approach for geographic information systems	292 ✓
Michael Bundock	
Developing a DBMS for Geographic Information: a review	302 ✓
Gerald Charlwood, George Moon and John Tulip	
Geographic information processing in the PROBE database system	316 ✓
Frank Manola, Jack Orenstein and Umeshwar Dayal	
Geographic information processing using a SQL-based query language	326
Kevin Ingram and William Phillips	
An information system for geosciences: design considerations	336
Marinos Kavouras and Salem Masry	
Attribute handling for geographic information systems	346
Peter Aronson	
A geographic database system	356 ✓
Willem van Biljon	
The dbmap system	363 ✓
Donald Cooke and Beman Dawes	
Design and implementation of microcomputer based water resources decision support systems	370
Marc Armstrong	

Future directions

Trends in hardware for geographic information systems	380
Jack Dangermond and Scott Morehouse	
The misguided evolution of future mapping technology	386
David Gallant	
Human interface requirements for vehicle navigation aids	396
Matthew McGranaghan	

Educational software

Enhancement and testing of a microcomputer-based GIS for university instruction	403
Duane Marble, Sherry Amundson and Jatinder Sandhu	
An integrated PC based GIS for instruction and research	411
David Cowen and Brian Rashe	
IDRISI: a collective geographic analysis system project	421
J. Ronald Eastman and Stacy Warren	
Classless choropleth mapping with millions of colors: a developmental system	431
James Carter, Carolyn Bolton and M. Elizabeth Ward	
Computer-assisted terrain analysis on a microcomputer	437
Scott Loomer	

Applications projects

Results of the Dane County Land Records Project	445
Bernard Niemans Jr. and Jerome Sullivan	
The display of boundary information: a challenge in map design in an automated production system	456
Dana Fairchild	
Automatic map inset determination	466
Frederick Broome, Constance Beard and April Martinez	
Assessing community vulnerability to hazardous materials with a geographic information system	471
Robert McMaster and James Johnson	
Improvement of GBF/DIME file coordinates in a geobased information system by various transformation methods and "rubbersheeting" based on triangulation	481
George Fagan and Henry Soehngen	
Fighting spruce budworm with a GIS	492
Glen Jordan and Leon Vietinghoff	
Automation of flood hazard mapping by the Federal Emergency Management Agency	500
Daniel Cotter and Daniel Lohmann	

Expert systems

Expert systems applied to problems in geographic information systems: introduction, review and prospects	510
Vincent Robinson and Andrew Frank	
The expert geographic knowledge system: applying logical rules to geographical information	520
Kenneth Gardels	
Are cartographic expert systems possible?	530
Peter Fisher and William Mackaness	
Expert system interface to a geographic information system	535
Bruce Morse	

Vehicle navigation and location

Automobile navigation in the past, present and future	542
Robert French	
Digital map requirements of vehicle navigation	552
Marvin White	
On giving and receiving directions: cartographic and cognitive issues	562
David Mark	

Research into electronic maps and automatic vehicle location	_____572
Edward Krakiwsky, Hassan Karimi, Clyde Harris and Jim George	
A relational database model for an AVL system and an expert system for optimal route selection	_____584
Hassan Karimi, Edward Krakiwsky, Clyde Harris, Guy Craig, and Rob Goss	

CD ROM

The map-environment interface: surrogate travel by videodisc (abstract)	_____594
Laurence Carstensen and Allan Cox	
The BBC Domesday project: a nation-wide GIS for \$4448	_____595
David Rhind and Stan Openshaw	

Mixed technical issues (poster session)

Acquiring approximate spatial representations of spatial relations: theory and results of tests	_____604
Vincent Robinson and Richard Wong	
Accessing large spatial databases via microcomputer	_____623 ✓
Christopher Heivly and Timothy White	
A general approach to map conflation	_____630
Anthony Lupien and William Moreland	
Raster and vector processing for scanned linework	_____640
David Greenlee	
Recursive approximation of topographic data using quadrees and orthogonal polynomials	_____650
Lloyd Leifer and David Mark	
Cartographic data entry through automatic feature tracking	_____660
K. Stuart Shea	
The inward spiral method: an improved TIN generation technique and data structure for land planning applications	_____670
David McKenna	
Scale-based simulation of topography	_____680
Keith Clarke	

Algorithms for cartographic design

An algorithm for locating candidate labeling boxes within a polygon	_____689
Jan van Roessel	
Practical experience with a map label placement algorithm	_____701
Steven Zoraster and Steven Bayer	
Automatic recognition and resolution of spatial conflicts in cartographic symbolisation	_____709
William Mackaness and Peter Fisher	
Calculating bisector skeletons using a Thiessen data structure	_____719
Robert Cromley	

Database maintenance

Area matching in raster mode updating	_____725
Jean-Phillipe Grelot, Pascal Chambon, and Françoise Marche	
Polygonization and topological editing at the Bureau of the Census	_____731
David Meixler and Alan Saalfeld	
WYSIWYG digitizing: real time geometric correction and topological encoding	739 ✓
Denis White, Jonathon Corson-Rikert and Margaret Maizel	
Softcopy methods of cartographic database maintenance	_____744
Lawrence Dambra and Conse Vecchio	
Testing a prototype spatial data exchange format - the Federal Geographic Exchange Format experience (abstract)	_____753
Robin Fegeas	
Integrating multiple data representations for spatial databases	_____754 ✓
David McKeown Jr. and Robert Lai
